time spent: 1.5 hrs

Content:

😋INSTANT RAMEN!!!😋

- Hacks
- Brands
- Instant Ramen Machine

Target 🚢 Date:

- 2022-11-7

Files Needed:

- 3 HTML files
 - content.html
 - login.html
 - createaccount.html
- Python file to host Flask server
 - app.py
- SQLite3 database file
 - tables.db

Pages Needed:

1. Content
2. Login
3. Create Account

Homepage:

- Flask launches the most recent webpage
- Edit page button/link at the top of webpage, before site content
 - Brings user to login page if not logged in already
- Nav bar with home, login, make account

Login Page:

- Look at K10-12 for reference
- Nav bar with home, login, make account
- Check login table if username and password match
 - Tell user if/which ones don't match
- Have a link to the create account page
- After login, direct back to content page

Make Account Page:

- Nav bar with home, login, make account
- Ask user for username and input
 - Each username must be unique because the username is how we identify who made changes
- Check logins to make sure the username doesn't exist
 - If it exists, prompt user to select new username
 - If it doesn't exist, add username and password to login table
- Direct back to login page

One Database, Contains Logins Table:

logins	
username	password
i_hate_coding123	HeheHAHA1010
bmcc_my_fav	Myparentshatemecusbmcc
pickleSURPRISE!	think_simple_think_smart

Tasks:
